

New Post-op Return to Floor Navigator Go Live 10/26/17

Reason for change – to prevent duplicate admit/transfer orders when patient returning to the floor post-op. Providers will now have a consolidated button called Post-op on the left side with 3 tabs within that contain 1) Post-op Discharge, 2) Post-op Admit and 3) Post-op Return to Floor, which is a new navigator.

Post-op Return to Floor, is only used when a patient is a current inpatient and returning to an inpatient unit. This will correct problems with duplicate admit/transfer orders.

The 3 tabs are used as follows:

Post-op Discharge – for all same day surgery patients that will be discharged post-op – contains a Discharge order within Med Rec.

Post-op Admit – for all patients being admitted post-surgery or being admitted to a higher level of care, like the ICU – contains a Transfer order within Med Rec.

Post-op Return to Floor *new* – for any patients who are currently inpatient and returning to an inpatient unit.
